

INLAND REPEATER GROUP

Southern California PNW Digital Affiliate

Welcome. Just a few things of interest specific to Inland Repeater Group that you will want to be aware of. All three repeaters are Open. They do carry some key PNW Digital Talk Groups, as well as the usual CA regional and State TGs.

COVERAGE:

Santiago Peak: This is a primary radio site that has coverage in LA County, Orange County, San Bernardino County, Riverside County, and San Diego County. Not all of these counties have solid coverage. Primary coverage is LA/OC areas, and also parts of SB and RIV. The greater LA Basin and Inland Empire areas south of the mountains

Blue Ridge-West: Located above Wrightwood, this is a primary radio site that covers the High Desert. Palmdale, Lancaster, across Hwy 58 from Tehachapi, Victorville, and over near Lucerne Valley. There is some coverage in the LA basin, which overlaps Santiago coverage.

Wrightwood: Located in Wrightwood at 6050'. Coverage includes WW, and out into the desert along Hwy 395 and east to Lucerne valley.

TALK GROUP DECK:

As always, details matter. Follow the IRG data sheet that defines TG's to Time Slots. There are differences between IRG and PNW Digital as far as the actual TG's, and their assignments to TS's. Naming conventions are sometimes different.

MCT (Master Control Talk Groups):

See---- <http://pnwdigital.net/talkgroups/mct.html>

Additional OPEN Repeaters in the Region: (Not Affiliated with PNW Digital)

Western States DMR: <http://www.westernstatesdmr.com>

These repeaters and Talk Group Decks will require manual addition to your codeplug. They do not carry any PNW Digital TGs, except for I-5 (be aware of usage restrictions) and Mountain Regional.

QUESTIONS ??? Drop a note.
